Thermochromic Icon

A thermochromic icon is standard on all VersaSeal® checks. Thermochromic inks react to changes in temperature. If you touch or blow on an image printed in this ink it will disappear and reappear after it cools. Thermochromic ink's reaction to temperature changes cannot be replicated on a color copier or laser printer therefore ensuring the authenticity of the document.

VersaSeal® SecureX™

An 8 1/2" x 14" pressure seal form that makes hidden information nearly impossible to view without opening properly or destroying the form. Variable data is applied and forms are folded and sealed. The information is hidden using a unique set of glue lines around the information and a series of blockouts on multiple panels. The information is only revealed after the form is opened and a special die-cut tab is pulled back.

Useful For:

- Contests
- Grade Reports
- Test Results
- Promotions
- Billing Information
- Tax Information
- Receipts
- Investment Information
- PINs

Envelopes

Envelopes are an efficient, cost-effective manner in which to display and promote the name of your organization. Our extensive selection can accommodate your stock or custom envelope needs.

Stock Envelopes

Stock envelopes can be produced in a variety of sizes, shapes, styles and colors. We have a large selection of stock envelopes with multiple standard window placement options.

We offer our customers a competitive advantage by die-cutting most of our envelopes from rolls rather than sheets, substantially reducing paper costs and spoilage.

Options Include:

- Various Standard Sizes
- Window Placements
- Catalogs
- Booklets
- Side Seams
- Four-Color Process

Standard Security Features Available on All Tiers:

Invisible Embedded Fibers – Only seen under black light, these fibers are embedded into the paper stock for most of our check products.

Microprint Endorsement Lines – Appearing as a solid pattern to the naked eye, these words are printed so small that they cannot be replicated by most copiers or scanners.

Thermochromic Icon – An icon printed in thermochromic ink reacts to changes in temperature.

Warning Band – A printed message that calls attention to the security features that protect the document.

Padlock Icon – An indicator to all parties accepting checks that additional security features have been incorporated, only authorized by the Check Payment Systems Association.

Diagonal Dimensional Backer – Different spacing of diagonal lines used in the check backer deter altering by cut and paste method.

High Security Features Vary by Tier:

Artificial Watermark – These can be viewed while holding the document at a 45 degree angle. Copiers and scanners capture images at 90 degree angles and cannot read these marks.

True Fourdrinier Watermark – A True Fourdrinier Watermark is a faint design pressed into the paper while it is being manufactured. When held to the light, these watermarks are easily visible from either side of the paper. Copiers or scanners are not capable of replicating True Fourdrinier Watermarks.

Chemical Reactive Paper – Produces a stain when activated with ink eradicator-class chemicals.

Chemical Reactive Box – When checks are printed on Chemical Reactive Paper, there is a warning box that calls the attention of the check verifier.

Hologram – Multicolored three-dimensional image that appears in a reflective material when viewed at an angle.

Invisible Fluorescent Logo – A logo printed in invisible fluorescent ink can only be seen when viewed with a black light. Very useful for authenticating a document.

Toner Adhesion – A chemical coating that fuses the toner to the sheet thus preventing the removal of toner with tape or by scraping.

Visible Embedded Fibers – These fibers that are within the paper stock can be seen with the naked eye.

Ultimate Security Features Vary by Tier:

Unique Image-Shifting Pantograph – An image shifting background that cannot be duplicated.

Overt & Covert Fluorescent Icons – Fluorescent inks that can be seen with, and without, a black light for authenticating a document.

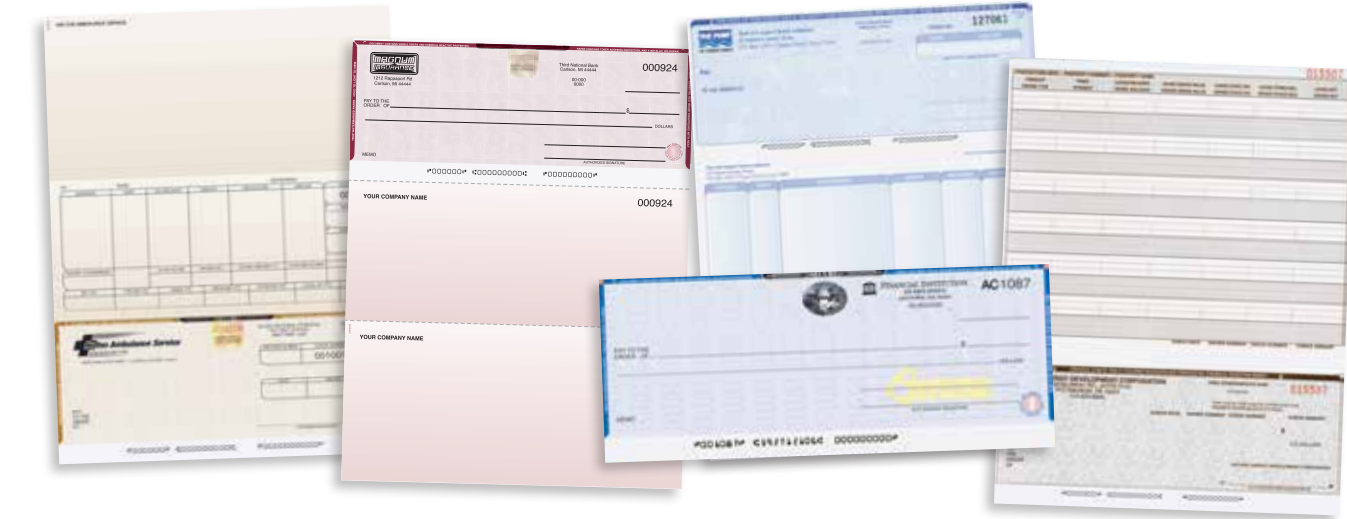

Survivable Image – Special printing technique renders portions of the check invisible when scanned, enabling verification of original document via the stored check image.

Eagle Hologram – Multicolored three-dimensional eagle image that appears in a reflective material when viewed at an angle.
